

Setting the Standard

Season the Design

In 2009, SSAB Laminated Steel AB was acquired by Metalcolour A/S and became Metalcolour Sverige AB. The business operation is still the same, but the fusion resulted in increased knowledge, a wider market and greater possibilities.

Metalcolour coat steel with laminates, lacquer or print. We are the world's leading supplier of foil laminated sheet steel for the marine sector and a highly specialised manufacturer of lacquered sheet metal. With 60 employees, two production plants and more than 35 years' experience, Metalcolour offers high flexibility, just-in-time delivery, the highest quality and personal service with extensive product knowledge.

Our largest product, Dobel, is well known in our branch. For many people, Metalcolour and Dobel have been synonymous with high quality and a wide range of colours and patterns.

Hundreds of Colours. Quantity of Surfaces. Millions of Opportunities. We make it possible for you to Season the Design.

Vår kompetens är miljöriktig skrothantering och återvinning på bästa sätt för Metalcoulor!

High quality throughout the entire business

Our production plants are fully equipped and manned by competent personnel. Many years' experience and high competence, together with flexible production capacity, allow us to hold a high and repeatable quality, at the same time as we can offer our customers tailor-made solutions.

We perform continuous received-goods inspections on all material from our suppliers, and we test our products so that we know that they fulfil our customers' high demands upon us.

Lacquered, laminated or both?

Metalcolour offer packet solutions, where the customer can have both

lacquered and laminated products. No restrictions, just possibilities!

Fireproof products

The majority of Metalcolour's products are certified for fire-resistance by leading fire classification societies such as Bureau Veritas, BV, Det Norske Veritas, DNV, United States Coast Guard, USCG and Russian Maritime Register of Shipping, RS.

The products are well suited to environments where especially strict demands are placed on fire security and food safety, for example in marine interiors, such as walls and ceiling panels for ship cabins, bathrooms and showers, as well as furniture and doors.

Day and night
your guiding light.

Move Forward with Confidence

Metalcolour Laminated

Lamination has been our main product since we started our business. We were first in Europe with lamination and we have more than 35 years' experience of the process.

Our laminated steel is divided into the main groups **Dobel Fire Classified** and **Other**.

Dobel Fire Classified consists of the traditional **Dobel F105**, the more luxurious **Dobel Aulux**, the deep embossed **Dobel Padena** and the halogen-free **Dobel 2005**. **Dobel** is a group in continuous development and expansion.

The **Other** group consists of the food graded **Foodsafe**, the more basic **Indoor** and the UV-resistant **Outdoor**.

Metalcolour has a standard range of more than 100 colours and designs. But thanks to our reliable suppliers who offer only the best quality, we can fulfill our customers' wishes even if they are outside our standard range.

Our production facility is small and very flexible, and as the only manufacturer in the world, we can offer quantities down to 10 sq.m.

Metalcolour Paint

Our Paint business area has a small and efficient production compared with other European lacquering lines. Our minimum production quantity is 500 sq.m. This gives us high flexibility and the ability to adapt our production after our customer's wishes.

Metalcolour Paint is available in three different lacquer qualities; the versatile **polyester**, which is available both with and without fire classification, the reliable **polyurethane** and the traditional **plastisol**.

Products from business area Paint are for example, garage doors, external roofing, inner roofing and white goods. The fire classified polyester is well-known within the marine industry.

Metalcolour offer you all the colours in the world. In other words, you can always expect exactly the right colour. All you need to do is provide us with the correct colour code from the RAL or NCS systems.

Metalcolour Print

Metalcolour Print makes use of two different techniques: Dye Sublimation and UV-Print. Thanks to our modern machinery, we can print any image you like on any material you can think of.

Dye Sublimation

Using this technique provides completely new creative possibilities for producing eye-catching designs. We print using six colours, which gives a high image quality with sharp colours and good colour depth.

UV-print

Metalcolour offers digital printing on steel, aluminium, streamer material, backlit polycarbonate, glass, etc. UV-print is also fire classified.

Infinite ideas
in aluminium

Det vore väl en dröm att få behålla ungdomens styrka och skönhet i evighet?
För aluminium är det verklighet. Aluminium kan användas om och om igen,
utan att förlora i kvalitet. Det är en förnyelsebar resurs som kan sättas in i
oändligt många nya produkter i generationer.

Hydro är aluminium. Vi är stolta över att kunna framställa denna förträffliga metall
som lever ett nytt liv, om och om igen.
